

## Extra Credit Activity

Group D - Punit Salian, Saad Khan, Lamonte Carter, Scott Shelley

You can find the work at the following github location:

<https://github.com/PunitSalian>

To run our program, please follow these steps:

1. Download the python script, ExtraCredit5102.py, and the twitter scrape file, Pokemon.txt, into a folder of your choosing.
2. Open the python script ExtraCredit5102.py in a text editor.
3. Adjust the location path for the input file of the program, Pokemon.txt, to your local folder. Adjust the location path for the output files, xtraCrdtOutFile1, xtraCrdtOutFile2, xtraCrdtOutFile3, and xtraCrdtOutFile4, to the local folder you want the files to be created in and written to. Save these changes.
4. Run the script ExtraCredit5102.py, with updated location paths, from your command line or environment of choice.
5. When prompted, enter the number of results you want per output file (10 is what is dictated in the activity prompt.)
6. You will get the output on the console and to the output files.
7. Enjoy your data analysis!
